

Please DO NOT prohibit XM radio from broadcasting traffic and weather news specific to certain geographic areas. My reasons are: 1) We travel by motorhome around the country. When entering a city served by XM Weather we know instantly which channel to turn to to hear updated information, WHEREAS if we rely on the local broadcasters we must search all over the FM and AM bands to find out which station is carrying weather info. Even that is problematic because most local stations broadcast weather and traffic a few minutes out of each hour and may not be broadcasting such as we scan across.

2) This is a service I pay for.... in fact here in Florida I pay almost 25% additional in taxes!!!!
